

HEAVY METALS IN SELECTED FRESHWATER FISHES
AT THE UPPER STREAM OF LIWAGU RIVER, RANAU

HASLINA ASIS

BACHELOR OF SCIENCE (Hons.) BIOLOGY
FACULTY OF APPLIED SCIENCES
UNIVERSITI TEKNOLOGI MARA

DECEMBER 2013

ACKNOWLEDGEMENTS

All praise to Allah S.W.T, for this Final Year Project (FYP) would not have been completed without the support of many people. First and foremost, I would like to express my deepest gratitude to my supervisor, Mr. Ansir Salim, who has been very helpful in offering endless encouragement, positive comments and guidance throughout the completion of this report.

I would like to extend my appreciation to Miss Noor Ezawanie Moulton for the help regarding my laboratory work especially when preparing the samples and solutions for AAS detection. Not to forget, Mr. Ajimi Jawan, FSG 660 Project coordinator for his consistent contribution and constructive ideas in correcting the format of my report. Not to forget to all of the Science lecturers for all the guidance during my studies as a UiTM student.

I also would like to express my thank you to all laboratory assistants; Mdm. Atifah Remat, Mdm. Dk. Suhana Ak Yunos, Mr. Muhammad Sufri Salimun, Mr. Amzah Jaafar, Mr. Jemat Basri and Mr. Mohd. Hanafi Sadli who assisted me with patience on my request for laboratory use of materials, apparatus and information for this report.

I am also grateful to the Department of Fisheries KK, Mr. Ramlie Raiman from the Department of Fisheries Ranau, The chairman of Tagal system, Mr. Peter from, Kg. Badukan, Mr. Saimin from Kg. Kituntul Baru and Mr. Julymie from Kg. Pinausuk and many others that I did not mention. Thank you for all the help.

To Farnadia Taip and family for the warm hospitality and accommodation.

I would like to convey thanks to my father, Asis Gani, my sister, Lisa Asis and my brother, Haazrul Asis for the moral and financial support. I really appreciate that.

Last but not least to all of my friends especially from group FSG 660 (Dg Syahidah Nadiah Abdull Majid, Sheelah Stanis Joseph, Raimalynah Abd Razak, Siti Faridah Amin, Nur Ayuni Eleena MT Azar, Herman Umbau Lindang, Faziella Puasah, Aaron Solibun, Sharmiza Sanin, Effaniza Binit, Ahmad Fariz Nicholas, and Stalin Joefrey) for their support and useful suggestions during the preparation of this report. Not to forget to Intan Zawannah Eshaap and Anis Syazana Suhaili for lending me your ears and shoulders.

Haslina Asis

ABSTRACT

HEAVY METALS IN SELECTED FRESHWATER FISHES AT THE UPPER STREAM OF LIWAGU RIVER, RANAU

The study of heavy metals (Cadmium, Copper, Iron and Manganese) in freshwater fishes was conducted from September to December 2013 at the upper stream of Liwagu River, Ranau. Three stations for sampling were set up (Kg. Pinausuk, Kg. Kituntul Baru and Kg. Badukan). Fish samples (muscle and gills) and water samples were collected by using casting net and collecting bottles respectively. Heavy metal concentration was analyzed by Atomic Absorption Spectrophotometer (AAS) while the physicochemical water parameters were taken by the Hydrolab parameter. In general, all physicochemical parameter are in class I which means that it is a healthy condition for the freshwater fishes. The results for heavy metals showed that all stations have Cadmium concentration below zero (below detection limit). All heavy metal fall in the classes (I, II, III) that are considered good condition except for Manganese (class v). Iron showed the highest concentration in all stations followed by Manganese and Copper. The heavy metal concentration in the muscle and gills obtained are muscle has mean concentration of 0.0464 mg/L while gills have mean concentration of 0.0462 mg/L. All stations showed a positive correlation between gills and water more than the positive correlation between muscle and water. This is due to the ability of the gills to absorb more water borne chemicals compared to muscle. All stations have heavy metal concentrations below the permissible limit according to the Malaysian Food Act 1983 and Food Regulation 1985 except for Iron. All comparisons are based on mean concentration of different species where *Lobocheilus bo* has the highest metal concentrations and *Puntius sp.* has the lowest metal concentration.
