ABSTRACT

In Malaysia, awareness in investment is still an indistinct issue among society. There are a lot of investment products being introduced by financial institutions and yet the initiatives to save for their life are step sided by many. In general, employees with savings from their contributions in EPF are more secure in terms of their financial standing. However, many studies have shown that there is considerable dissatisfaction with the returns it has provided to contributors through the management of its assets which is difficult to sustain their life for the remaining years out of the workforce. An increasing responsibility placed on individual employees in managing their investment and saving which demands them to have adequate knowledge about investment. Therefore, this paper, subjectively, aimed at discussion on EPF investment among private sector's employees in Dungun, Terengganu. Thus, a theoretical framework is developed to illustrate the relationship between financial risk tolerance, financial and investment knowledge, and religious commitment. This study utilised questionnaire-based surveys to solicit responses from employees who are working in private sectors in Dungun, Terengganu. Data collected from 200 employees were analysed using statistical procedures of SPSS version 19.0. Based on the investigation, the result reveals that there is significant relationship between all independent variables towards dependent variables. As a whole, the whole model is demonstrated that all the independent variables are able to explain 18.4% of the total variation dependent variables. The rest of 81.6% can be explained by undefined variables in this research.

Keywords: Investment, EPF, Knowledge, Employees, Saving

ACKNOWLEDGEMENT

In the name of Allah, the Most Gracious and Most Merciful.

This research proposal would not have been possible without the help and support of many people and institutions.

First and foremost, we would like to thank Associate Professor Norudin Mansor, our supervisor and Dr Jamaluddin Helmi, Coordinator Program for his advice and guidance. We are very grateful for her high level of interest and the many hints she provided throughout the study. The sharing of your precious knowledge and sacrifices are mostly appreciated. Your patient and tolerance with our limited knowledge and time constraint had been a great help.

We are deeply indebted to all staff of Buler Engineering Sdn Bhd, PFCE Engineering Sdn Bhd and MSET Engineering Sdn Bhd for their cooperation and ideas to help us to complete our research proposal.

Finally yet important, to all lecturers in University of Technology MARA, our family and classmates of EMBA Program in Dungun, Terengganu for their motivations and sources of inspiration and had made the learning so fun and enjoyable.

Last but not least, to the Almighty, Alhamdulillah, for the continuous good health, without which we might not complete our research proposal.

Thank you very much.

Yours Sincerely,
NOOR ELLINA, AHMAD FARID RIDHWAN & KASMARUDDIN
