## ABSTRACT

The government's distribution of open data makes considerable use of various platforms, one of the most important of which is government websites. As proposed by the previous study, this study explores variables including information quality with completeness, accuracy, and relevance as the dimensions, system quality with responsiveness, flexibility, and reliability as the dimensions, perceived ease of use, perceived usefulness, and relationship quality with satisfaction and trust as the dimensions. However, reliability has been removed as a dimension of system quality because it did not surpass the predetermined threshold. Thus, there remained only two dimensions of system quality. This study aims to measure citizens' engagement levels concerning the usage of government websites. Apart from that, this study also measures the relationship between information quality, system quality, perceived ease of use, perceived usefulness, and relationship quality with citizens' engagement in government websites. The study used a quantitative approach with non-probability sampling (purposive sampling) involving Klang Valley residents with experience using government websites who are 21 years old and above. A theoretical framework was suggested, and a few hypotheses have been constructed. The data were collected from 413 respondents; the valid number was 411, exceeding the minimum number of respondents as suggested by the Raosoft calculator. The data were analyzed using Statistical Package for Social Sciences (SPSS) and Partial Least Square Structural Equation Modelling (PLS-SEM). All the proposed hypotheses tested were significantly positive and supported. The study's principal contributions can be evaluated from theoretical, empirical, and practical perspectives. From a theoretical standpoint, as most Open Government Data (OGD) and/or government website-related studies only utilize satisfaction or trust separately, it is believed that using RSQ as one entity can contribute to advancing knowledge. This study also introduced RSQ as a new variable that has a positive significant relationship with citizens' engagement in government websites. As a practical contribution, the research proposes reworking the produced instrument into a module that could serve as a streamlined set of rules and guidelines for both the website's design and the information and data it presents. From an empirical viewpoint, this study adds value to the field of OGD, where the initiative should not only emphasize an open government portal as a one-stop center but also emphasizes the ministry's website. However, despite achieving its objectives, this study is limited in several ways, including the survey method, obtaining respondents, the group of respondents, and the role of the variables. In the future, to avoid time consumption, the questionnaire design may consider proceeding without translation into other languages. This is related to the selection of target respondents, who were involved from various walks of life. In addition, perceived ease of use and perceived usefulness were not used as mediating variables in this study. Therefore, for future research, both variables may be considered as mediating variables.

## ACKNOWLEDGEMENT

Completing a PhD is a monumental achievement, and it would not have been possible without the support and encouragement of so many people. First and foremost, I would like to express my sincere gratitude to Allah the Almighty for giving me the opportunity to complete this journey. Secondly, my supervisors, Associate Professor Dr. Azman Mat Isa and Dr. Norizan Anwar, for their invaluable guidance, expertise, and patience throughout my research journey. Their unwavering commitment to excellence has inspired me to push the boundaries of my own academic abilities.

I also extend my deepest appreciation to my mock viva committee members, Associate Professor Dr. Roziya Abu, Dr. Abdul Rahman Ahmad, and Dr. Mohamad Rahimi Mohamad Rosman for their valuable feedback, insightful suggestions, and encouragement. Their expertise and guidance have been instrumental, and I have learned so much from their diverse perspectives and experiences. Not to be forgotten, a special appreciation to Mdm. Nor Haryati and Mdm. Ramlah from Post Graduate Studies, School of Information Science, for their support and kindness throughout my studies there. I am also grateful to the Research Assistant, Fatin Nurliyana, for assisting me during the data collection.

Lastly, but certainly, not least, I want to express my deepest gratitude to my family, especially my husband, \_\_\_\_\_, and my children, \_\_\_\_\_ and \_\_\_\_\_ for their unconditional love, support, and sacrifices. I also thank my greatest cheerleaders, confidants, and role models, in loving memory of my late mother, \_\_\_\_\_ who passed away during my sixth semester: thank you for your prayers, which became the impetus for me to continue advancing forward. To my father, \_\_\_\_\_ thank you for always believing in me since I was a little girl. I owe them everything. In closing, I dedicate this thesis to all who have supported and believed in me, especially my PhD mates. Writing this section feels like entering a surreal dream, because attaining a Doctor of Philosophy had never existed in my dream, and I never thought I could. This accomplishment is precious and meaningful, so I want to dedicate it to my younger self. I hope that my research will contribute to advance our understanding of the field of study and I look forward to continuing to learn, grow, and remember to keep my feet on the ground when I reach for the stars.

<b>LIST OF ABBREVIATIONS</b>	<b>xxi</b>
<b>CHAPTER ONE INTRODUCTION</b>	<b>1</b>
1.1 Overview	1
1.2 Background of The Research	1
1.3 Problem Statement	8
1.3.1 The Lack of Studies on Citizens' Engagement and Government Websites	9
1.3.2 The Lack of Relationship Quality in Using Government Websites	10
1.3.3 The Lack of Usage of Government Data and Information in the Government Websites	11
1.3.4 Weakness of Government Websites	14
1.4 Research Questions	19
1.5 Research Objectives	19
1.6 Context and Scope of The Research	20
1.7 Definition of Terms	21
1.7.1 Data	21
1.7.2 Information	21
1.7.3 Citizen Engagement	21
1.7.4 Perceived Ease of Use	22
1.7.5 Perceived Usefulness	22

1.7.6	Relationship Quality	22
1.7.7	Information Quality	23
1.7.8	System Quality	23
1.7.9	Open Government Data	24
1.7.10	Government Information	24
1.7.11	Government Website	24
1.8	Assumption of The Research	25
1.9	Research Methodology	26
1.10	Significance of The Research	26
1.11	Structure of The Thesis	28
<b>CHAPTER TWO LITERATURE REVIEW</b>		<b>30</b>
2.1	Overview	30
2.2	Government Information Sharing Platform	31
2.3	Open Government Data	34
2.3.1	Open Government Data in Malaysia	37
2.3.2	Roles and Functions of OGD	43
2.3.3	Open Government Data Initiatives in Malaysia	48
2.4	The Government Websites	50
2.4.1	Ministries' Websites	52
2.4.2	Malaysia Open Data Portal Website	59
2.4.3	OpenDOSM Website	64
2.4.4	Malaysia Open Science Platform (MOSP) Website	64
2.5	Previous Studies on Government Websites	64
2.6	Citizens' Engagement in Using Government Website	72
2.6.1	Previous Studies on Citizens' Engagement	75
2.7	Perceived Ease of Use	82
2.8	Perceived Usefulness	84
2.9	Relationship Quality	85
2.9.1	Satisfaction	86
2.9.2	Trust	87
2.10	Information Quality	88
2.11	System Quality	90
2.12	Summary	92
