## ACKNOWLEDGEMENT

I would like to show our deepest gratitude and warmest appreciation to all the parties who keep support and help me in completing this meaningful final year project. I would never able to make it through without the proper guidance, advice as well as support. First and foremost, I would love to express my sincere thankful to respective advisor, Puan Suhaily Maizan Abdul Manaf and examiner, Puan Nurul Syuhada Baharuddin. All along the way, she shows her patience and guides me without a whim. She provided me with a schedule and makes me discipline all along this project, helps I to go through our research projects and make correction. She motivates me through her knowledge and constantly reminds me on what we should do. Her encouragement helps me through this project.

Next I would also like to express my appreciation to my mentor and the lecturers and teachers who taught me, guided me and encouraged me in my studying journey. Your best knowledge, constant guidance and sincere encouragement had led me complete this project paper successfully and all will become my support in my future.

Lastly, I would like to thank my family, all my friends and also my fellow course mates for their constant support mentally or literally in assisting me to complete this paper project. I am very grateful and I appreciate your suggestion, guidance and help me in realizing this project. It is because from here we learn the willingness to contribute and sacrifice our time, cooperate, support and help each other.

---

(ILY FARAHIN BINTI ABDUL AZIZ)

## ABSTRACT

Over the past 30 years, ASEAN countries' government debt has been on an increase, with the increase closely linked to a number of economic factors. The changing quantities and qualities of government debt have become a national concern. Data related to the changes in dependent which is government debt and independent variables are inflation, interest rate, investment and gross domestic product between 1980 and 2016 was used in the study. The model was tested For Pooled Ordinary Least Square, Random Effect Model, Breusch-Pagan Lagrange Multiplier, Fixed Effect Model and Hausman Test. Moreover, three out of the four expectations were met in a significant manner through the long-run relationships. The government manages to reduce government debt by increasing investment. But, the government increases GDP and interest rate by increasing government debt. Based on the four explanatory variables, it is clear that the government rely on investment for the repayment of government debt. Lastly, this research can be a guideline to government to be a better way and decrease the amount of government debt. It is advice that adjustment in policies is necessary in order to align growth with improvement in the determinants of government debt.
