CSC711: ADVANCED SOFTWARE ENGINEERING

Course Name (English)	ADVANCED SOFTWARE ENGINEERING APPROVED
Course Code	CSC711
MQF Credit	3
Course Description	The course aims to develop the depth understanding of the discipline of software engineering by considering the wider systems engineering context in which software plays a role. It aims to examine the principles, concepts and techniques associated with a number of advanced and industrially relevant topics, relating to both the product and processes of software engineering. It seeks to complement this with an account of the associated practical and professional issues in software engineering.
Transferable Skills	The student will be equipped with demonstrateability to identify and articulate self skills, knowledge and understanding confidently and in a variety of contexts related to the selection of appropriate software engineering methodologies, techniques and process models. The students can analyse emerging technologies in software engineering. Besides, they can design software systems that meets user requirements. The students are also able to evaluate software engineering techniques in a large-scale software development project. Lastly, the students can evaluate software engineering artefacts produced in software development project.
Teaching Methodologies	Lectures, Blended Learning, Discussion, Directed Self-learning
CLO	CLO1 Apply appropriate software engineering methodologies in evaluating software systems. CLO2 Synthesize information on current computing technologies that are significant to software engineering application. CLO3 Accommodate teamwork skill in formulating software engineering artifacts.
Pre-Requisite Courses	No course recommendations
Topics	
1. Software Engineering Notions and Concepts 1.1) Introduction to software engineering 1.2) Introduction to software systems 1.3) Managing software development activities 1.4) Software development project planning and scheduling 1.5) Introduction to UML	
2. Requirement Engineering 2.1) Requirements Fundamentals 2.2) Requirements Process 2.3) Requirements Elicitation 2.4) Requirements Analysis 2.5) Requirements Specification 2.6) Requirements Validation 2.7) Requirements Artifact	
3. Software Design and Architecture 3.1) Software Design Fundamentals 3.2) User Interface Design 3.3) Software Structure and Architecture 3.4) Software Design Strategies and Methods 3.5) Distributed System Architecture Design 3.6) Service-oriented Architecture Design 3.7) Component-based Architecture Design 3.8) Key Issues in Software Design	

4. Software Evolution

- 4.1) Software Maintenance Fundamentals
- 4.2) Software Life Cycle and Evolution
- 4.3) Software Evolution Process
- 4.4) Techniques for Software maintenance

5. Special Topics

- 5.1) Software Security Engineering
- 5.2) Agile Development
- 5.3) Pattern-oriented Software Architecture
- 5.4) Software Process Improvement
- 5.5) Mobile Application Development
- 5.6) Software Quality Management
- 5.7) Software Engineering Economics
- 5.8) Current Trends in Software Engineering

Assessment Breakdown	%
Continuous Assessment	100.00%

Details of Continuous Assessment	Assessment Type	Assessment Description	% of Total Mark	CLO
	Assignment	Assignment 1	10%	CLO2
	Assignment	Assignment 2	10%	CLO2
	Case Study	Term Paper	20%	CLO2
	Group Project	Project	20%	CLO3
	Test	Test 1	20%	CLO1
	Test	Test 2	20%	CLO1
