ACKNOWLEDGEMENT

Bismillahirrahmanirahim and Assalamualaikum W.B.T. In the name of Allah, the Most Gracious and Most Merciful.

First of all, I want to thankful to my God, Allah because giving a guidance, inspiration and healthy body to me to complete my thesis successfully because without His blessing, I would not finished this final year project.

Then, I like express my deepest gratitude to my advisor Dr Ahmad Suffian Bin Mohd Zahari for his valuable assistance and support. I am really appreciate for all his kindness to teach, assist and guide me in completing this report. Other than that, he always motivates and encourage me from the beginning until the end of this report in order for me to perform well. I am extremely grateful to have his as my advisor for this report.

Besides, I would like to express my gratitude and appreciation to my second examiner, Madam Suhaily Maizan Binti Abdul Manaf for giving encouragement and advise to complete this project.

Furthermore, during completing my thesis, my parents always support me by giving me some advising and also supporting my financial. Other than that, I am not forgetting to thanks to my brothers, sisters and my best friends because always be with me when I am up and down during I am finishing my thesis.

Lastly, I want to thanks to those who are always helping me in finding information which was relating with my thesis. Thank you so much.

CHAPTER FIVE: CONCLUSION AND RECOMMENDATIONS.....	37

ABSTRACT

This study is being investigated on the factors influencing the movement of exchange rate in Malaysia. There are several factors that affecting the movement of exchange rate in Malaysia. It may be affected by internal or external factors. The analysis of this study has mainly focused on the empirical test of money supply, interest rate, gross domestic product, stock price and inflation rate towards exchange rate. The method that has been used in this study is Ordinary Least Square (OLS) and used annually data that has been taken from 1980 until 2016 (37 observations). Using annually data and Ordinary Least Square regression, the results show a negative relationship between interest rate, money supply and inflation rate. In contrast, the results for stock price and gross domestic product show strong significant and have a positive relationship with exchange rate. When the interest rate, money supply and inflation rate increase, the exchange rate will decrease while when the gross domestic product and stock price increase, it shows that increasing in exchange rate. Based on the finding, many factors can be taken to be influencing the movement of exchange rate in Malaysia.

Keywords: Exchange rate, stock price, inflation rate, gross domestic product, money supply, interest rate.
