ABSTRACT

Financial development is regarded as a healthy positive sign towards the economic growth in Asian countries. Financial development has a correlated with the economic growth of the countries this study is basically to know what cause can affect the financial development and economic growth in the Asian countries.

This study concentrates on the secondary data whereby panel data were used as data collection method. We used stata software in order to getting the result of this research. This research has two (2) models which are first, economic growth as dependent variables and for independent variables are investment share, inflation and financial depth. Second model is financial depth as dependent variables and for independent variable are investment share, inflation and economic growth (GDP).

The objective of this study is to examine how investment share, inflation and financial depth influence economic growth of the countries and to examine how investment share, inflation and economic growth influence financial depth. Moreover, this study tries to provide some suggestion and recommendations regarding financial development and economic growth in Asian countries.

This research is supported by the literature reviews though references from books, journal and articles, and also internet.
