ACKNOWLEDGEMENT

In the name of Allah S.W.T the creator of all creations, all praises be to Him the Most Merciful the Most Blessings.

First and foremost, I sincerely to thank to my advisor, Prof. Madya Haji Zamri Bin Mohd Noor who gives me guidance, advice and comments in completing this project paper. Special thanks also go to my second advisor, Prof. Dr. Wan Mansor Bin Wan Mahmood who evaluates my report and presentation.

Special thanks also for all the staffs of Majlis Perbandaran Sepang for giving me an opportunity and trustworthy to do my practical training at Majlis Perbandaran Sepang in Cyberjaya. Special appreciation is extended to my supervisor, YM Raja Zulhelmi Bin Raja Abdullah for the valuable guidance, advice, opinion and support during the practical training and also to all staffs for their helps and giving a space during practical to finish my report. All the memorable experiences are valuable and all your kindness is appreciated.

Besides, special mention also for all my friends especially to my classmates BBA (FIN) both classes, thanks for your support and commitment.

Hope this project paper will be useful to all students, especially to those who are interested in this study.

5.2	Conclusion	37

ABSTRACT

This study is focus on the changes of house price indicators in Malaysian. The first objective of this research is to study the relationship between the dependent and independent variables. Secondly, the objective is to determine the most dominant factors that contribute to the changes of house price indicators in Malaysia. Lastly the objective of this research is to propose some recommendations and suggestions in order to help the management to overcome the problem faced. All the objectives were using different method in analyze the result.

For the first and second objectives, the researcher used multiple regression analysis in order to get the result. So, it shows that the regression analysis can prove the first and second objectives where the result shows that only one independent variable are significant with the dependent variable while the other two variables are insignificant. Then, the result of regression analysis also has shown the most dominant factor that contributes to the changes of house price indicators. It shows that the income per capita is the only variable that significant and the most contribute to the changes of house price indicators in Malaysia. In addition, to test the fourth hypotheses, the researcher using the descriptive analysis to know the differences whether Malaysian people know or not the changes of house price indicators. Then, after the research done, the researcher can know that all the hypotheses can be proven and the excellent analysis about the result of regression can be made.
