## ABSTRACT

As the scope of this study is confined to the the movement of containers in Klang Valley, it is essential to highlight the activities of the main participants of containerisation.

The aim of this Graduation Exercise is to study the operations of individual organisations that are the container terminal operation, the documentation and procedure systems with regards to FCL containers and the hauliers which individually is a link to a huge chain in containerisation.

There are many problems accounted in the chain of containerisation of which the main purpose of this Graduation Exercise is to analyse the problems encountered and seek probable solution towards efficiency in container transportaion in Klang Valley.

### The Objectives of the study area

- a. To review and analyse the present container transportation in Klang Valley.
- b. To identity and look into the problems with regards to container transportation.

## ACKNOWLEDGEMENTS

I would like to express my sincere gratitude and appreciation to those who have given their full cooperation valuable information and advice without which the completion of this Graduation Exercise would not have been possible.

Firstly, I would like to convey my greatest appreciation to my supervisor in Overseas Container Limited (OCL), Encik A.H.M. Nasir who is the Shipping Manager (operation) in Port Kelang for his advice, encouragement and constructive criticisms.

I would also like to convey my special thank to my advisor in Mara Institute of Technology, Mr Navaratnam for her valuable advice and guidance in the course of writing this Graduation Exercise.

My word of appreciation to the staff in Overseas Container Ltd. and for all the direct and indirect help rendered during my six months practical training whereby their assistance and encouragement, this thesis would not have been successful.
