ACKNOWLEDGEMENT

Assalamualaikumwarahmatullahiwabarakatuh.

Alhamdulillah. Finally I managed to complete this system, which is called Subscription to Info Mobile System and Student Portal. While developing this system, there are so many parties who lend their hand to me for giving me guide and line.

First of all, I would like to say thank you to my beloved supervisor, Pn Shahniza Kamal Bashah for the counsel, help and guideline she gave. Her constant encouragement and enthusiasm for new ideas really help me in completing this system. I also want to thanks to Pn Zaidah Ibrahim, Subject coordinator of ITC 599 for her patience, guideline and opinion.

Then I would like to say thank you to my course mates for sharing their ideas with me and also for giving suggestions and opinion. And last but not least, I would like to thanks my parents and family for their non-stop moral support; even though they are far away form me now.

Thank you very much.

Rashidah Abd Aziz.

ABSTRACT

Mobile Info System is a system where the subscriber will be informed via short message system (SMS). The subscriber will receive the latest information about what is happening at FTMSK and any other announcement or events through SMS to keep them updated and alert. The SMS push system will be implemented here.

What I am going to do here is the subscription to the system. The student can subscribe to the system through the portal I made. "Subscription to Info Mobile System and Student Portal" is a web-based system which has 2 sections. The first section is for students to view all the latest news about job vacancy, the latest technology and also the latest events that will be happening at FTMSK. They can post bulletin and there is a forum for them to discuss about anything. Besides that, they can update their profile and change their password. The second section is for the administrator's view, where he is the one who put the latest news and manage the students' profile, the bulletin board and the forum. Both sections are protected by using username and password.
