## **ABSTRACT**

Mathematics, specifically Linear Programming (LP), is used to reduce telecommunication network delays in this study. Modern society relies more on efficient data transmission, making network performance and latency optimisation essential. Excel Solver is used to investigate using LP to distribute user sessions to reduce network time. The project seeks to optimise telecommunication network resource allocation by analysing data and creating an LP model. After reviewing relevant literature, the LP model is developed and designed. Using Excel Solver, the study evaluates how LP reduces network delay and ensures data flow. Excel Solver improved model precision, allowing the network delay to be reduced to below 200 ms. This figure may slightly exceed the initial delay, but it is still within an acceptable range and deemed minimum for practical reasons. This optimisation proves LP approaches work in telecommunication. These findings help telecommunications professionals develop future solutions to increase network performance and user experience. The reduction in network latency proves these technologies work, paving the path for future innovations in responsive and efficient telecommunication networks.

## **ACKNOWLEDGEMENT**

Firstly, we extend our heartfelt thanks to our dedicated and knowledgeable lecturer, Sir Mohd Azdi Maasar for imparting their expertise and fostering an enriching learning environment. Their passion for the subject matter has been an inspiration, and their commitment to nurturing intellectual curiosity has greatly contributed to our academic growth.

We are profoundly grateful to our supervisor, Dr Mohamed Faiz Bin Mohamed Said, for their unwavering guidance and mentorship. Their insightful feedback, constructive criticism, and commitment to our academic and professional development have been pivotal in shaping the outcome of this work. Their encouragement and patience have made this endeavor both challenging and rewarding.

Finally, we would also like to express our deepest appreciation to our parents for their unconditional love, unwavering support, and constant belief in our abilities. Their sacrifices, encouragement, and understanding have been our pillars of strength, motivating us to persevere through challenges and pursue excellence.

Additionally, we extend our thanks to our friends, who have provided camaraderie, support, and collaborative efforts throughout this academic endeavor. Their diverse perspectives and shared experiences have enriched our learning experience.

# TABLE OF CONTENTS

	<b>Page</b>
<b>SUPERVISOR’S APPROVAL</b>	<b>i</b>
<b>AUTHOR’S DECLARATION</b>	<b>ii</b>
<b>ABSTRACT</b>	<b>iii</b>
<b>ACKNOWLEDGEMENT</b>	<b>iv</b>
<b>TABLE OF CONTENTS</b>	<b>v</b>
<b>LIST OF TABLES</b>	<b>vii</b>
<b>LIST OF FIGURES</b>	<b>viii</b>
<b>LIST OF ABBREVIATIONS</b>	<b>ix</b>
<b>CHAPTER ONE: INTRODUCTION</b>	<b>1</b>
1.1 Problem Statement	2
1.2 Research Objectives	3
1.3 Significance of Study	3
1.4 Scope and Limitations of Study	4
1.5 Definitions of Terms	4
<b>CHAPTER TWO: LITERATURE REVIEW</b>	<b>5</b>
2.1 Introduction	5
2.2 Voice over Internet Protocol (VoIP)	5
2.3 Fuzzy Logic System	6
2.4 Gradient-Based Minimum Delay (GBMD) algorithm	6
2.5 Mixed integer linear programming (MILP)	7

2.6	Case study based on delay in neural network	7
2.7	Case study on transmission delay	8
2.8	Linear Programming (LP)	8
<b>CHAPTER THREE: RESEARCH METHODOLOGY</b>		<b>10</b>
3.1	Introduction	10
3.1.1	Stage 1: Identify the background of study	11
3.1.2	Stage 2: Literature Review	12
3.1.3	Stage 3: Development of model and data	12
3.1.4	Stage 4: Implementation of model	21
3.1.5	Stage 5: Result collection	21
3.2	Implementation	21
3.2.1	Calculation to minimize the total network delay	21
3.2.2	Usage of Excel Solver in to solve linear programming	22
<b>CHAPTER FOUR: RESULTS AND DISCUSSIONS</b>		<b>23</b>
4.1	Background of Study	23
4.2	Result of Optimization of VoIP	23
4.3	Limitation	31
<b>CHAPTER FIVE: CONCLUSION AND RECOMMENDATIONS</b>		<b>32</b>
5.1	Overview	32
5.2	Conclusion	32
5.3	Recommendation	33
