ACKNOWLEDGEMENT

“In The Name Of Allah, the Most Gracious and the Most Merciful”

First of all, I would like to present an appreciation to Allah for giving me the effort, strength and inspiration in completing this paper.

For my special acknowledgement, I would like to express my deepest appreciation and thanks to my supervisor, Sir Hisam bin Bulot as well as my second advisor, Pn. Noor Azillah bt Mohamad Ali whom inspired me a lot and very a helpful guidance in preparing and completing this research. I would also like to thank for their ideas, advice and supportive comment during completing my research.

I also like to thank to my beloved family for their love, support, encouragement, advice and their sacrifice to ensure that I can give the best effort for this research. Last but not least, my acknowledgement goes to individuals who are directly and indirectly involved in this research and given valuable information and assistance.

Thank you.

ABSTRACT

Stock market is one an important indicator of economy in the country. This research aiming to investigate the weather could influencing the stock market performance. Therefore, this research want to examine that the relationship between weather and stock market performance. Good market return in the country are said to be an essential part of country economic development. So the investor must know when the market return can give good advantages to them. Therefore, the good weather can give positive relationship with the market return. The dependent variable on this research is Kuala Lumpur Composite Index (KLCI) and the independent variable are categories as types of weather that are cloud cover, evaporation, humidity, rainfall and temperature. There is no general consensus between this combinations of this weather. In addition, time series data analysis for a period of 2011-2015 (5 years) in daily basis has been used in this paper. Time series regression analysis was used to recognize the most optimal model in explaining the level of stock market performance. The findings of this paper designate that the average of market returns for the period of study is 21.21%. In the meantime, evaporation, humidity and temperature is the only variable that significantly shows a positive relationship with market return, while cloud cover and rainfall showing no significant relationship with market return.

Keywords: Market returns, KLCI, Weather
