ABSTRACT

In this study, we investigate the relationship between the dependent variable that is unemployment rate in Sabah and Sarawak and its independent variables that is foreign direct investment (FDI), export, and economic growth. The dependent variable will use as explanatory variables. What are the relationships of these variables? Do the explanatory variables have positive and negative impact towards the dependent variables? We examine the dynamic relationship of these variables using the single regression, multiple regression, Johansen co-integration test, and Granger Causality test.

ACKNOWLEDGEMENT

I am grateful to thanks to Allah S.W.T in giving me strength to completing this thesis on time without many barriers of health and many more. I also heartily thankful to my supervisor, Mr Hylmee Matahir, whose encouragement, guidance and support from the initial to the final enabled me to develop an understanding of the subject and hopefully can accept my precious work with better mark, and thanks for all the help. My family that always pray and wishes for the best to me, and also supporting me in financial and advices, thanks so much. It is also a pleasure to thank those who made this thesis possible especially to all my friends that always give different opinion on finishing this thesis, and lastly to the future researcher that choose this thesis as one of their references.
