**Arabic Character Recognition System Using
Convolutional Neural Network (CNN)**

Nurul Amira Binti Abdullah

**Thesis submitted in fulfilment of the requirements
for Bachelor of Computer Science (Hons.) College
of Computing, Informatics and Mathematics**

FEBRUARY 2024

ACKNOWLEDGEMENT

Alhamdulillah, praises and thanks to Allah S.W.T because of His Almighty and His utmost blessings, I was able to finish this research within the time duration given. I would like to express my sincere gratitude and appreciation to all those who have contributed to the completion of this research on Arabic Handwritten Recognition using Convolutional Neural Networks (CNN).

First and foremost, I am grateful to my supervisor Sir Zulkifli Bin Halim for his guidance, support, and valuable insights throughout the research process. His expertise and encouragement have been instrumental in shaping this study.

I extend my heartfelt thanks to my lecturer, Ummu Fatimah Binti Mohd Bahrin for her valuable feedback and suggestions, which have significantly contributed to the improvement of this work.

I would like to acknowledge the participants who generously provided their handwritten Arabic text samples for the dataset used in this research. Their contributions have been invaluable in enabling the development and evaluation of the CNN model.

I am indebted to the researchers and scholars in the field of Arabic Handwritten Recognition using CNN, whose previous work and publications have laid the foundation for this research. Their insights and findings have served as a valuable reference and inspiration throughout this study.

I would also like to express my gratitude to my family and friends for their unwavering support and encouragement. Their belief in my abilities has been a constant source of motivation.

Lastly, I would like to thank the academic institutions, funding organizations, and research facilities that have provided resources and facilities enabling the successful completion of this research endeavor. Without the support and contributions of all those mentioned above, this research would not have been possible. Thank you for your invaluable assistance and guidance throughout this journey.

ABSTRACT

This research project focuses on Arabic Handwritten Recognition system using Convolutional Neural Networks (CNNs) algorithm. This study delves into the challenging realm of Arabic handwriting recognition, spurred by the intricate nature of the script and the scarcity of specialized tools and high-quality training data. The investigation primarily focuses on the effectiveness of Convolutional Neural Networks (CNNs) in mitigating these challenges through the development of a Handwritten Character Recognition System (HCR) tailored for Arabic script. Leveraging CNNs, the system endeavors to accurately transcribe and comprehend handwritten Arabic documents, thereby facilitating efficient processing and analysis. Through a comprehensive literature review, the research underscores the significance of Arabic handwriting recognition across various domains, such as document digitization, archival systems, historical document analysis, and language learning, particularly among toddlers. Methodologically, the study adopts a structured seven-phase approach, commencing with a preliminary study encompassing a comprehensive literature review to identify the project's objectives, scope, and significance. Subsequent phases include requirement analysis, data collection, prototype design, implementation, evaluation, and documentation. By meticulously collecting and partitioning a dataset of 16,800 handwritten Arabic characters into training and test sets, the project rigorously trains and evaluates the CNN model, achieving commendable accuracy rates of 92.50% and 97.35% in testing and training, respectively. Beyond technical advancements, the research emphasizes broader societal implications, such as cultural preservation, educational benefits, and technological advancements. However, identified limitations, notably in handling diverse character variations and computational requirements, underscore the need for continued research and refinement. Overall, this project signifies a significant milestone in the field of Arabic character recognition, promising broader accessibility to Arabic language materials and enriching cultural heritage preservation efforts through transformative technological advancements.

TABLE OF CONTENTS

CONTENT	PAGE
SUPERVISOR APPROVAL	ii
STUDENT DECLARATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF FIGURES	ix
LIST OF TABLES	xi
LIST OF ABBREVIATION	xii
CHAPTER ONE: INTRODUCTION	
1.1 Background of Study	1
1.2 Problem Statement	3
1.3 Objectives	3
1.4 Project Scope	4
1.5 Significance of the Project	4
1.6 Overview of Research Framework	6
1.7 Conclusion	7
CHAPTER TWO: LITERATURE REVIEW	
2.1 Introduction	8
2.2 Handwriting Recognition System	10
2.2.1 Overview of Handwriting Recognition System	10
2.2.2 The Use of Handwriting Recognition System	11
2.2.3 Arabic Handwriting Recognition	13

2.3	Machine Learning	15
2.3.1	Overview of Machine Learning	15
2.3.2	Machine Learning Technique	16
2.4	Convolutional Neural Network	20
2.4.1	CNN and How Does It Works	20
2.4.2	Benefit of CNN's	22
2.4.3	Implementation of CNN Algorithm in Various Problem	23
2.5	Similar Works	27
2.6	The implication of Literature Review	31
2.7	Conclusion	32

CHAPTER THREE: METHODOLOGY

3.1	Overview of Research Methodology	33
3.1.1	Detailed of Research Framework	33
3.2	Research Phases	37
3.3	Preliminary Study	38
3.4	Knowledge Acquisition	39
3.5	Data Collection	40
3.5.1	Data Description	41
3.5.2	Data Pre-processing	42
3.6	Design Phase	43
3.6.1	System Architecture (Logical Design)	44
3.6.2	Flowchart (System Development Flowchart)	45
3.6.3	User Interface Design	47
3.7	Prototype Implementation	48
3.8	Performance Evaluation	49
3.8.1	Confusion Matrices	50
3.9	Gantt Chart	53
4.0	Conclusion	54
