## ABSTRACT

This study aims to estimate human height based on foot length using three different methods: Least Squares Method, Runge Kutta 4th Order, and Cubic B-spline. Data from 50 participants were collected through the Google form. The Goodness of Fit metrics, including Mean Squares Error (MSE), Root Mean Square Error (RMSE), R-squared, Adjusted R-squared, Akaike Information Criterion (AIC), and Bayesian Information Criterion (BIC) were analysed to evaluate the performance of each method. The results indicate that the Runge Kutta 4th Order method consistently outperformed the other two methods across all Goodness of Fit metrics. It achieved the lowest MSE and RMSE values, indicating superior predictive accuracy compared to the Cubic B Spline, which had the highest MSE and RMSE values. The R-squared and adjusted R-squared values for the Runge Kutta algorithm were close to 1, suggesting an excellent fit and capturing a significant proportion of the variance in the data. Furthermore, the AIC and BIC values also favoured the Runge Kutta 4th Order method, with the lowest values, indicating a better trade-off between model fit and complexity. On the other hand, the Cubic B-spline method had the highest AIC and BIC values, suggesting poor model fit or excessive complexity. In conclusion, based on the Goodness of Fit results, the Runge Kutta 4th Order method is recommended for estimating human height based on foot length. Additionally, the analysis revealed a weak positive relationship between foot length and human height, as indicated by Pearson's correlation coefficient.

## ACKNOWLEDGEMENT

I would like to express my sincere gratitude and appreciation to all those who have contributed to the completion of this report. First and foremost, I extend my deepest thanks to Sir Muhamad Fauzi bin Embong for being my supervisor for their invaluable guidance, constant support, and insightful feedback throughout the entire process. Their expertise and dedication have been instrumental in shaping the direction and quality of this report.

Secondly, I would like to extend my heartfelt gratitude and appreciation to all the participants who took the time and effort to respond to the questionnaire used in this report. Their participation has provided a significant contribution to the research and has helped to gather crucial data for the analysis. I am sincerely grateful for the commitment and cooperation demonstrated by each participant throughout the completion of the questionnaire. Their contributions have been invaluable in achieving the objectives of this study.

Additionally, I am grateful to my friends and family for their unwavering encouragement and understanding during this undertaking. Their support and motivation have been invaluable in keeping me focused and motivated throughout the writing process. I also would like to express my gratitude to all the individuals who have supported me during the entire research process. Their encouragement and belief in my abilities have been a constant source of motivation.

In conclusion, this report would not have been possible without the support and contributions of all the individuals mentioned above. I am sincerely thankful for their assistance, and I acknowledge their invaluable contributions to the successful completion of this project.
