ADVANCE DIPLOMA IN BUSINESS STUDIES (MARKETING)
GROUP 1A .

DATE OF SUBNISSION: 04.12.1990

SYNOPSIS

This project is a continuation of the proposed automation system of registration and placement of students at Delima College by the previous ADBS (M) students. In continuing the project, our group which consists of 5 members have carried out a feasibility study and have come out with some findings and recommendations. The scope of our study is confined to Delima College only. In collecting data for the project, we had done some desk research for secondary data and had also conducted personal interviews with the Warden and staff of Delima College, Officials and staff of Students Affairs Department and also some students who are residents of Delima College.

Like any other research project, we also face some problems in doing this porject. They include time constraint, limited sources of information and no basic knowledge of computer. In the current system (manual) a lot of problems are faced. These include duplication of work, time consuming (delay) etc. Because of these, an automated system is recommended in order to ensure an effective and efficient way of registering and placing students at Delima College. Through this system, it is hoped that many related problems can be overcome. As a whole, the system will benefit both the users and the institute.

ACKNOWLEDGEMENT

We would like to express our approbation and gratitude to our lecturer, Encik Kamaruddin L. Sulaiman for his invaluable edivive, comments and guidance touvids the preparation of this present paper.

We would also take to convey our charks to the vertical and our cers of Delana college for Their is discussional and convert discussional and convert discussional making this project a suchase.

Lastly, to all our classmakes, rouncedates and those wid have contributed in one way or another to the success of our popular. we wish to express our sincers thanks to thom.
