ABSTRACT

MODAT STUDY TABLE FROM PARTICLEBOARD

This research is about a study table that was made from wood panels product which is particleboard. The MODAT name are combination of two elements which is modern element and attractive design. Particleboard is a type of composite panel that is often manufactured using wood as the primary component. It is manufactured by compressing small wood particles and then simultaneously attaching them together using an adhesive. According to the findings of the study, particleboard has potential for usage as an alternative raw material. The purpose of this research is to develop a design for a study table that makes use of particleboard as an innovative raw material, to build a study table, and to conduct a survey to collect responses from participants regarding the knowledge, marketing and satisfaction of respondent for the study table. The procedure for analysing the data was based on the completion of a questionnaire by 99 individuals from a variety of demographic categories, including age, gender, occupation, income, and social status. The knowledge, marketing and satisfaction levels of the respondents served as the basis for the evaluation, which was carried out based on those factors. Several types of analyses, including reliability analysis, demographic analysis, comparative analysis, descriptive analysis, and correlation analysis, have been performed on the data. The findings indicate that most respondents had a positive impression of the product. This study table, which is composed of particleboard, hence possesses a great potential for commercialization within the current market for furniture.

ACKNOWLEDGEMENTS

First of all, I would like to thank Allah for giving me the most valuable chance to finish this thesis and also for giving me the peace of mind to deal with all the problems and obstacles I had to face in order to do this task right. Thank you very much to my hardworking supervisor, Madam Ainul Munirah Binti Abdul Jalil, for all of her help, advice and enthusiasm as I worked on this thesis. I would like to thank the staffs of Kabinet Dapur Mutiara as allow me to manufacture my product for the thesis. Additionally, I am very grateful for the friendship of all members that involve as furniture technology student such as Mohd Irwan Bin Rosli, Azlif Rohaizad Bin Abd Razak, Mohd Hazwan Bin Khalid, Faris Triputra Bin Zahari and Imadudin Khairul Aznam. Lastly, and most importantly, I want to thank my father, for having faith in me and letting me be as ambitious as I wanted to be. Your prayers for me have kept me going so far.
