ABSTRACT

MULTIFUNCTION GARMENT RACK FROM RUBBERWOOD

The study of garment furniture was critical, to complete this project and guarantee the understanding of what is needed to do base on the project objectives. The globe is presently faced with a lot of important challenges as a result of demographic expansion and resource constraints. Since to overcrowding in the living region, such as a major city, people are forced to live in small spaces such as flats or apartments. As a result of all of these difficult difficulties, multi-functional furniture has evolved as one of the solutions to the problem of space efficiency. Multi-function furniture integrates many functions into a single piece to save material consumption while saving the user space. To overcome these issues, a design for a multipurpose garment rack will be produced for this research. The chosen responder will be given a set of questionnaires to provide feedback and comment based on the design provided. According to the study's results, respondents agree on the factors of material, design, marketing, and product satisfaction. This study's objective has been accomplished. Many responders approved of the product design.

ACKNOWLEDGMENT

First and foremost, I would express my gratitude to Allah for providing me with the most valuable chance to accomplish this thesis and for providing me with the confidence to complete it properly. En. Nik Hazlan Bin Nik Hashim, my supervisor, deserves a special thank you and gratitude. He is not just a diligent supervisor, but also a teacher who has always provided excellent guidance throughout the project's completion. This task would never be completed properly without his assistance. In addition, I'd like to express my gratitude to Dr. Siti Zalifah Binti Mahmud, Project Coordinator, and Norhafizah Binti Rosman, Head, School of Wood Industry, for allowing me to supervise this project.
