ACKNOWLEDGEMENTS

Praise to Allah the Almighty for giving me knowledge throughout this period of study and for all that has bestowed on me. It is with His power the study is completed.

I would like to express a very special gratitude and thankfulness to my supervisor, Associate Prof. Dr. Zainab Abu Bakar who giving me reliance and shrewd guidance that have profited me very much. Besides that, she also gives me lots of support in this knowledge quest. Also special thankfulness to Associate Prof. Dr. Norlaila Mohd Noor with her guidance to finish this project.

My special appreciation is due to the Dean of Faculty of Information Technology and Quantitative Sciences, Associate Prof. Azizi Ngah Tasir and the Programme Head of Bachelor (Hons.) Information Technology, Pn. Salwani Jaafar who give me a good management services throughout my degree program.

To my friends in my class and also in the faculty, who are simply too numerous to indicate, thanks for your time, understanding and buttress. May Allah will reciprocate you for all those things.

Last but not least, to my parents En. Bakar Hj Hassan and my brother-in-law En. Mohd Haziran Mohd Zainuddin who is important in teaching me in doing my project system especially in coding, and also to my siblings, I would like to

ABSTRACT

Calculation of Distributed Property for Deceased Person Based on Faraid Rules (Focus on Death Husband)

Islam is the way of life. Islam is a religion that covers all aspects in life, where here means a life in the real world and also in the day after. In Islam, Allah has its rules and all the rules that are made by Allah have its own advantages to people in their daily life before and also after their death. Because of this reason, Islam has stated a fair system in distributing the property to the rightful heirs. This is important in order to ensure all the family members especially to the inheritance, get the right share of the inheritance property.

Faraid is a knowledge that many people easy to forget because they do not know and take this knowledge as an important knowledge to learn. Usually, people or someone like to know or learn the knowledge when there are a person death and the property of the death person need to be distribute among the heir. This situation should not happen and this knowledge should be learn continuously in order to protect people from misunderstand where the death occur.

In this project paper, I will make a calculation of distributed property for deceased person that base on faraid rules. The faraid knowledge and rules are big. In this rules, there are 25 person involve and known as inheritance. But for my project paper, there are 5 people involve where this calculation is made for husband deaths only with his heir are his wife, son (of his wife), daughter (of his wife), mother and father.

CHAPTER 1

INTRODUCTION

1.1 Introduction

Faraid is one of the important system and rules in Islam that calculates the distributing properties for deceased people. The main function of this project is to provide user with tools for easy calculation to distribute their properties. This project will define the types of properties that can be inherited by person upon his or her death to their heirs. The heirs will be ensuring by looking to the relationship with the deceased person.

1.2 Background of the Online Faraid System

Currently, online *faraid* systems for deceased person that are available are limited. Due to this problem, it is important to broad the study in distributing properties based on *faraid* system.

There are several organizations that employ information about and system for *faraid* calculation. However, these systems of distributed properties among heirs for death person are not satisfying the user because more of the organization refers to the same system. Although for organization in Malaysia, Singapore Syariah Court provides this online system and it is joined venture with Majlis Ugama Islam Singapura (MUIS).
