## ACKNOWLEDGEMENT

“In the name of ALLAH, The Merciful, The Gracious”

Alhamdulillah to Allah the almighty for forward the such a great strength, patience, courage and also ability for us to complete this research. Peace and blessing of Allah ne upon His Messenger, Muhammad SAW

The success and final outcome of this study required a lot of guidance and assistance from many people and we extremely fortunate to have got this all along the completion of our study. Whatever we have done is only due to such guidance and assistance and we would not forget to thank them. We respect and thanks to Madam Azhana Binti Othman for giving we an opportunity to do this research on this topic and providing us all support and guidance which made us complete this study on time. We are extremely grateful to her for providing such a nice support and guidance.

We are really grateful because we managed to complete this research paper within the time given by lecturer. This study cannot be complete without the effort and co-operation from our group members. Last but not least, we would like to express our gratitude to our friends and family for support and willingness to spend some time with us and help us to complete this study. Thank you so much.

## ABSTRACTS

Inflation is a very important macroeconomic indicator, which can measure the general price changes of goods and services in a particular country. Inflation also may occur due to several factors and can give negative impact to a certain country if the level of inflation rate is too high. Basically, every country will experience inflation either high or low. The purpose of this study is to determine the factors that affect inflation in Malaysia. In this study, it consists of quantitative method and the econometric model is used to identify the relationship between the dependent and independent variables. Besides, this study also has discussed the autocorrelation, multicollinearity, Heteroscedasticity and Multiple Linear Regression. On the other hand, this study used time series data for the period 2005 to 2017. The results show that interest rate, unemployment rate and gross domestic product have a positive relationship towards the independent variable namely inflation rate while government expenditure has a negative relationship towards inflation rate in Malaysia.

*Keywords:* inflation, government expenditure, interest rate, gross domestic product, autocorrelation, multicollinearity, heteroscedasticity
